FIREPLACE SUITES 2016 - 2017

THE GALLERY COLLECTION

WELCOME TO THE GALLERY COLLECTION

The Gallery Collection presents an extensive range of traditional and contemporary fireplaces, combining supreme craftsmanship, quality materials and elegance in design.

Our desire is to provide you with a superb choice of fireplaces skilfully made with high quality materials, all fitted in your home by reputable retailers so you can enjoy the experience of buying and owning your own individual fireplace.

The **FIREPLACE SUITES & FIRES** within this brochure represent classic fireplace designs, some infused with a contemporary twist, aimed to complement a variety of interior styles. Many designs are available in a variety of stone finishes including Portuguese Limestone, Micromarble, Granite or Jurastone, all capable of combining with our extensive range of fires including our high efficiency gas fire range.

To give you more choice than ever before, The Gallery Collection includes the established range of Vision fires to complement our existing wide range of efficient gas and electric fires.

We hope this wide choice will allow you to select the perfect fireplace to suit your own particular taste.

Of notable interest are the Micromarble suites. These have some exquisite detail that is rarely seen in suites of this material. This is a testament to the skill of the craftsmen who are making these products with great care and attention.

We have pictured each suite design in a variety of options to demonstrate some of the many different combinations that can be achieved. A suite consists of the mantel, back panel and hearth.

Most suites in this brochure (with the exception of the models fitted with feature lighting) can be fitted against a flat wall without a chimney, if chosen with a suitable electric fire. All that is required is a power point.

We have generally shown the suites with gas and electric fire options. If burning solid fuel is your preference then please select a Portuguese Limestone suite and ask for a solid fuel hearth or refer to our other brochures. For a complete selection of suitable products please see our **MANTELS & CAST IRON FIREPLACES** brochure for a great range of inserts and the **STOVES** brochure for a superb range of stoves.

PORTUGUESE LIMESTONE

True beauty and elegance

This natural, sedimentary limestone formed over 50 million years ago is cut straight from the earth. It features characteristic darker veins on a light background, intermingled with fossils of plants and animal life, all adding to the beauty and individuality of this great material.

CHILTERN

CHILTERN

COTSWOLD

JURASTONE

Natural marble Chiltern and Cotswold finishes

This section contains suites made from natural materials and utilises an innovative finishing technique. JURASTONE is made from sheets of natural solid marble and then coated with one of two great finishes. These finishes are the smooth Cotswold and the slightly textured Chiltern. Both finishes give a consistent appearance of stone.

MARBLE & MICRO MARBLE

Polar White marble, Lunar White micro marble & Perla micro marble

Each of these beautiful stone finishes have their own features that help to create a truly unique fireplace. Polar White marble offers a brilliant, clear, classic look whilst the Lunar White and Perla micro marble add a sense of depth with its warm, mottled tones. All of these materials are crafted to the highest of standards with a flawless polished finish.

DETERMINE YOUR CHIMNEY TYPE

CHIMNEY TYPES

The chimney or flue in your house will normally determine what type of fire you will choose.

STEP 1 Identify which type of chimney you have or whether you have no chimney using the information below.

CLASS 1 CHIMNEY

Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.

CLASS 2 CHIMNEY

Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.

PRE-CAST FLUE

Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture above.

NO CHIMNEY

Modern houses often have no chimney. You can use a modern decorative electric fire, either with no heat for aesthetics or an efficient fire with up to 2kW heat output.

STEP 2 Now you know what type of chimney you have (or if you have no chimney) you can decide on the type of fire and preferred source of fuel. Ensure that the fire can be matched with a suitable suite combination.

FIRE TYPE	CLASS 1 CHIMNEY				CLASS 2 CHIMNEY			PRE-CAST FLUE			NO CHIMNEY
	MF	NG	LPG	Electric	NG	LPG	Electric	NG	LPG	Electric	
HIGH EFFICIENCY GLASS FRONTED		✓			✓						
CLASS 1 OPEN FRONTED CONVECTOR		✓	✓								
CLASS 2 OPEN FRONTED CONVECTOR					✓	✓		✓			
DECORATIVE GAS FIRE		✓	✓								
ELECTRIC INSET				✓			✓			✓	✓
BASKETS	✓	✓	✓	✓	✓	✓	✓			✓	✓
STOVES	✓	✓	✓		✓	✓					

NG - Natural gas available for all chimney types **MF** - Multi fuel **LPG** - Liquid Petroleum Gas (LPG) bottled gas

Electric with heat - Decorative electric fire. Up to 2kW heat output.

No chimney - As well as electric, we also offer a comprehensive range of balanced flue gas fires. Consult your dealer for more information.

CHOOSE YOUR FIRE TYPE

FIRE TYPES

The fireplace suites within this brochure feature models from our two ranges of fires; GALLERY and VISION. Both of these ranges consist of entirely exclusive designs, each with a choice of gas or electric 'engines' to suit almost every chimney/flue type.

Here is an explanation of how each of these engines differ from one another with a brief list of their key features.

HIGH EFFICIENCY GLASS FRONTED

Featuring a glass fronted, full depth ceramic coal fuel bed, these engines are the most efficient of all fire types. A Class 2 slim line version also is available for GALLERY fires.

CLASS 1 OPEN FRONTED CONVECTOR

A full depth fire suitable for Class 1 chimneys. Convector fires offer greater efficiency ratings than standard open fronted fires. Manual or slide control options available.

CLASS 2 OPEN FRONTED CONVECTOR

This fire type has the same features as the Class 1 version but with a reduced depth to suit a Class 2 chimney type. This is normally indicated by a more shallow fuel bed.

DECORATIVE GAS FIRE

A full depth fire suitable for Class 1 chimneys. The key difference with this type of fire is that it does not feature a canopy and produces radiant heat only.

INSET ELECTRIC FIRE

No chimney is required for these fires as they fit completely within most of our fireplace suites. They are operated by a remote control and have 1kW or 2kW heat output.

FIRE STYLES & FIRE TYPES

This page details the full range of Gallery fires available.

Some of the fires, such as the Aurora, the Solaris, and the Lunar feature a one piece decorative frame.

Others, such as the Bauhaus, Blenheim, Clevedon, Baltimore, and the Emperor feature a two piece decorative frame. All Gallery fires come with a comprehensive 1 year warranty. For options of the available engines for these fires, refer to the table at the bottom of page 63.

NOTES

[illegible]

A FOCUS ON SERVICE FOR YOUR PEACE OF MIND

All cast iron products are manufactured in ISO 9002 accredited manufacturing facilities.

All the gas fires we supply are tested in accordance with CE requirements and are CE marked.

All measurements are approximate and may vary slightly so allow for a tolerance of plus or minus 12mm.

To achieve some of the colour options, we plate the products using a variety of manufacturing processes. "Antique Brass finish" or "Chrome finish" are not brass or chrome.

MARBLE, MICROMARBLE & JURASTONE products are not suitable for solid fuel applications.

The colours shown in this brochure are as accurate as possible. If the colour you require is critical then please consult your retailer before making your decision.

When you are identifying your chimney please consult the table in the brochure. If you are not clear please consult your HETAS or GAS SAFE REGISTER (Board Gais in ROI) registered installer or your retailer.

Gas fires with a gas input of 6.9kW or less do not normally require air vents, however there are some circumstances where vents may be required. This is determined by your installer carrying out a spillage test during the commissioning process. If your chosen fire has a gas input greater than 6.9kW then a vent will be required. Please ask your retailer for further information.

There are occasions when designs, or products are altered or discontinued without prior notice (a reserved right). Please consult your retailer before making your final choice.

Whilst there appear to be no definitive regulations available, a sufficient gap must be provided around the basket when placed inside the fire chamber. This is essential because air must be able to flow into the fire in order for the fuel to burn effectively; the flue and fire chamber surfaces must be kept cool to avoid heat damage from the fire and where applicable gas controls need to be freely accessible.

THE INSTALLATION OF YOUR FIREPLACE

All installations must be carried out in accordance with the requirements set out in the Building Regulation documents, in particular, Approved Document J. Independent bodies have been approved to carry out installations in accordance with these regulations. For gas installations the most recognised independent body is GAS SAFE REGISTER (Board Gais in ROI) and for solid fuel installations it is HETAS. Please confirm with your retailer that your new fireplace will be installed appropriately.

If your new fireplace is fitted by a GAS SAFE REGISTER (Board Gais in ROI) or HETAS registered fitter you will be given a certificate stating that your installation has been carried out in accordance with the Building Regulations. If you do not have one of these certificates then you must arrange for your local Building Control Officer to inspect your installation and approve it.

Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer not only meets the requirements above, but that they also have the necessary experience to fit ALL those components, for example a Jura-Stone suite with a Fireframe and a powerflue fire.

UNDERSTANDING YOUR NEW GALLERY FIREPLACE COMPONENTS AND THEIR AFTERCARE AND MAINTENANCE.

PORTUGUESE LIMESTONE SUITES

Stone is naturally porous, so avoid spillages of coloured liquids such as fruit juices and red wine. In the event of an accident, use a specialist cleaning and resealing kit, following the instructions given by the manufacturer of the kit. Where chipping has occurred, use a fine wet and dry sand paper to blend out as necessary.

MARBLE & MICROMARBLE SUITES

Avoid spillages of strong coloured solutions and citrus juices as the acid may etch the surface. To maintain the subtle shine of the surface, occasionally wipe over with a solution of general household cleaner and buff with a soft dry cloth. Do not use any bleach or abrasive cleaning agents as these will scuff or dull the shine.

JURASTONE SUITES

Jurastone suites are manufactured from natural stone and finished with a revolutionary, patent applied for durable finish, with the realistic 'cold to touch' feel of natural stone.

GAS FIRES

A gas fire is a technical piece of equipment and, just like a gas boiler needs regular servicing. Please ensure that you have your gas fire serviced regularly by a GAS SAFE REGISTER (Board Gais in ROI) registered installer. This will help you enjoy safe and trouble free enjoyment of your fireplace for years to come and may be a requirement of the Government's Home Information Pack.
